Novel isolated, purified, or recombinant nucleic acid comprising polyketide modifying gene, there gene encodes polyketide modifying enzyme e.g., MegK, or MegM enzymes useful for producing modified polyketide.

Example 2; SEQ ID NO 2; 51pp; English.

ADII114148
ADII14148
AC ADII1
XX ILA
AC ADII1
AC ADII The invention relates to a novel isolated, purified, or recombinant nucleic acid (1) comprising a polyketide modifying gene, where the gene encodes a polyketide modifying enzyme chosen from MegR, MegF, MegK, MegCV, MegCV, MegBIII, MegL, and MegM enzymes. A method of the invention is useful for producing a modified polyketide, which involves culturing a recombinant cell comprising the recombinant nucleic acid

The cell produces megosamine and can attach megosamine to a polyketide, where the cell, it its naturally occurring non-recombinant state cannot produce megosamine. The present sequence contains downstream megalomicin modification enzyme genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence

Further disclosed is a recombinant DNA construct for expression of a nitrite reductase gene in a plant cell, and a plant cell comprising the recombinant DNA construct. The nucleic acid is useful for determining gene expression, identifying mutations in a gene of interest, and for constructing mutations in a gene of interest, and for constructing mutations in a gene of interest. Further disclosed is a recombinant DNA construct for expression of a nitrite reductase gene in plant cell, and a plant cell comprising the recombinant DNA construct. The nucleic acid is useful for determining gene expression, identifying mutations in a gene of interest, and for constructing mutations in a gene of interest. Sequences given in records for SEQ IDs 1-1849 represent a set of 1849 contig and singleton sequences comprising coding sequences, DNA replication elements, promoters and other regulatory elements from the genome of the bacterium Myxococcus and other regulatory elements from the genome of the bacterium Myxococcus and thus. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New substantially purified Myxococcus xanthus nucleic acid molecule encoding a nitrite reductase, useful for determining gene expression, identifying mutations in a gene of interest, and for constructing mutations in a gene of interest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Goldman BS,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a substantially purified nucleic acid molecule encoding a nitrite reductase of SEQ ID NO. 11926. Further disclosed is a recombinant DNA construct for expression of a nitrite reductase gene in a plant cell, and a plant cell comprising the recombinant DNA construct. The nucleic acid is useful for determining gene expression, identifying mutations in a gene of interest, and for constructing mutations in a gene of interest. Sequences given in records for SEQ IDS 1850-9691 represent a set of about 7842 genes or partial genes from the genome of the bacterium Mxycoccus xanthus. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New substantially purified Myxococcus xanthus nucleic acid molecule encoding a nitrite reductase, useful for determining gene expression, identifying mutations in a gene of interest, and for constructing mutations in a gene of interest.

Further disclosed is a recombinant DNA construct for expression of a nitrite reductase gene in a plant cell, and a plant cell comprising the recombinant DNA construct. The nucleic acid is useful for determining gene expression, identifying mutations in a gene of interest, and for constructing mutations in a gene of interest. Sequences given in records for SBQ IDs 1-1849 represent a set of 1849 contig and singleton sequences comprising coding sequences. DNA replication elements, promoters and other regulatory elements from the genome of the bacterium Mxyococcus xanthus. Note: The sequence data for this patent did not form part of the prince.

CC sequences given in ABQ81843 and ABQ81843, or a sequence spiven in ABQ81843 and ABQ81843, or a sequence spiven in CC ABQ81842 and ABQ81843, also described is a polynucleotide (II) encoding a CC fusion protein, comprising a sequence selected from 1097 sequences given in ABP65258 to ABP66354 ligated in frame to a polynucleotide encoding a CC heterologous polypeptide. (I) has antidiarrheic and antibacterial CC activities, and can be used as an inhibitor of Salmonella. (I) (which is C a probe) is useful for the detection and/or identification of CC Bifidobacterium longum in a biological sample. A carrier containing the CC lactic acid bacterium gifidobacterium longum NCC2705 (CNCM I-2618) can be used for preventing and/or treating diarrhoea brought about by pathogenic CC used for preventing and/or treating diarrhoea brought about by pathogenic CC products, ice-creams, fermented cereal based products, milk based for preventing and/or treating diarrhoea brought about by pathogenic CC products, ice-creams, fermented cereal based products, milk based CC products, ince-creams, fermented cereal based products, milk based CC gowders, infant formula, pet food or a pharmaceutical composition CC supplement, wet oral supplement, dry tube feeding or wet tube feeding. (I) is useful in DNA arrays or chips to carry out analysis of the Expression of the Bifidobacterium gene. ARQ81844 to ARQ81850 represent CC insting from the present invention but not mentioned further within the sequence CC insting from the present invention but not mentioned further within the sequence of the printed specification but is based on sequence information or summited by the Enronean Datent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel polynucleotide comprising a probe or primer for detecting in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a pol sequence of a Bifidobacterium genome

Sequences ABD01397 ABD17967 represent P. aeruginosa polynucleotides of the invention. The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2003-615309/58.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  18-FEB-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            18-FEB-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a pathological infection, for evaluating a compound, such as a polypeptide,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     P-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Rubenfield MJ,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          22-APR-2003

                                                                                                                                                                                                                                                                                     문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosis and the therefore the result of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, of the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa caused infection, and in detection of P. aeruginosa sequences or other sequences of pseudomonas species using biochip technology. Sequence ABD1397-CC ABD17967 represent P. aeruginosa polymucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosis and therefore therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial dargs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa capacet components for diagnosis and/or treatment of P. aeruginosa sequences or other sequences of feeducemonas species using biochip technology. Sequence ABD11397-CABD17967 represent P. aeruginosa polynucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to Pseudomonas aeruginosa polypeptides and the CC polynucleotides encoding them. The sequences are useful in diagnosis and CC therapy of pathological conditions, as molecular targets for diagnostics, CC prophylaxis and treatment of pathological conditions resulting from a CC prophylaxis and treatment of pathological conditions resulting from a CC deterial infection, for evaluating a compound, such as a polypeptide, CC for the ability to bind a P. aeruginosa nucleic acid, as components of CC effective antibacterial targets, as targets for antibacterial drugs, CC including anti-P. aeruginosa drugs, as templates for recombinant CC production of P. aeruginosa-derived peptides or polypeptides, as target CC components for diagnosis and/or treatment of P. aeruginosa-caused CC infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABD01397-CC ABD17967 represent P. aeruginosa polynucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches 108;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel abiotic stress responsive polynucleotides and polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are methods for using the polynucleotides and polypeptides to alter the responsiveness of a plant to abiotic stress. The invention is useful in agriculture. The nucleic acid is useful for determining whether a test plant has been exposed to an abiotic stress condition. It is also useful for selecting an agent that alters abiotic stress regulated polynucleotide expression in a plant cell, and to identify a homolog or ortholog to an abiotic stress responsive polynucleotide. The nucleic acid molecule and the polypeptide encoded by it are useful in altering the responsiveness of a plant to an abiotic stress, such as cold stress, salt stress, osmotic stress or any of their combinations. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nakagawa

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel nucleic acid array involving Corynebacterium glutamicum polynucleotides. The arrays are used to analyse C. glutamicum, particularly for monitoring a fermentation process to determine expression levels of C. glutamicum cellular manalevels of c. monitoring particularly differentiates between expression levels of different strains of C. glutamicum and allows the adjustment of different culture and fermentation conditions. ACA00010-ACA02188 represent C. glutamicum derived polynucleotides described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI;

```
with the first 300aa Containing several potential membrane spanning hydrophobic regions and the remainder of the protein showing similarity to the phosphodiesterase mentioned above. Also similar to a nearby gene on the same cosmid (SCBD9.22) fasta scores; opt: 736, z-score: 625.6, E(): 5.3e-30, (33.6% identity in 729 as overlap). Contains TTA Leu codon, possible target for bldA regulation. Also contains Pfam match to entry PF00990 DUF9, Domain of unknown function, score 166.70, E-value 3.9e-46 and Pfam match to entry PF00563 DUF2, Domain of unknown function, score 16.70 and though function 2, score 291.30, E-value 1.2e-83. Contains possible hydrophobic membrane spanning regions"

```
DESTINACIONASE IMASINALDS | ALD3 | YERO73W ALDEHYDE DESTINACIONASE from Saccharomyces cerevistae (Baker's yeast) (519 aa), FASTA scores: opt: 1091, E(): 2.7e-60, (38.55% identity in 459 aa overlap);
P80668 | FRAB ECOLI | PADA | MAOB | B1385 PHENYLACETALDEHYDE DEHYDROGENASE (EC 1.2.1.39) from Escherichia coli strain K12 (499 aa), FASTA scores: opt: 1074, E(): 3e-59, (42.3% identity in 462 aa overlap); etc. Also similar to many M. tuberculosis dehydrogenases e.g. P71823 | RV0768 | MTC7369.13 (489 aa), FASTA score: (38.1% identity in 467 aa overlap). Contains PS00687 Aldehyde dehydrogenases glutamic acid active site and PS00070 Aldehyde dehydrogenases cysteine active site. BELONGS TO THE ALDEHYDE DEHYDROGENASES FAMILY."
                                                                                                                                                                                                                                                                                                                                                                                                                                        /motes "MDJ2884C, ", len: 308 aa. Equivalent to Rv2859c, /notes "MDJ2884C, ", len: 308 aa, Equivalent to Rv2859c, len: 308 aa, from Mycobacterium tuberculosis strain H37Rv, (100.0% identity in 308 aa overlap). Possible amidotransferase (EC 6.3.5. - or 2.-.-), equivalent (but longer 58 aa) to Q9CBU9|ML1573 POSSIBLE AMIDOTRANSFERASE from Mycobacterium leprae (249 aa), FASTA scores: opt: 1226, E(): 3e-64, (71.55% identity in 239 aa overlap). Also similar to other amidotransferases and hypothetical proteins, but shorter in N-terminus e.g. 088072|SCI35.37 PHYPOTHETICAL 25.3 KDA PROTEIN from Streptomyces coelicolor (242 aa), FASTA scores: opt: 683, E(): 1.2e-32, (47.65% identity in 235 aa overlap); AAK79730|Q97188|CAC1764 PREDICTED GLUTAMINE AMIDOTRANSFERASE from Clostridium acetobutylicum (241 aa), FASTA scores: opt: 458, E(): 1.6e-19, (32.95% identity in 246 aa overlap); AAK75201|Q97QV9|Sp1089 GLUTAMINE AMIDOTRANSFERASE CLASS I from Streptococcus pneumoniae (229 aa), FASTA scores: opt: 431, E(): 5.6e-18, (34.75% identity in 236 aa overlap); etc. Contains three 17 aa repeats at the N-terminus very similar to those in other Mycobacterium tuberculosis proteins e.g. Q1669|YY30 MYCTU|Rv2090|MT2151|MTCY49.30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /product="PROBABLE ALDEHYDE DEHYDROGENASE ALDC"
